Election/Restrictions

Page 2

1. This office action is in response to the reply filed on 8/3/2006.

2. In the reply, the Applicant responded to an Office Action mailed 1/25/2006 by Examiner Prasad.

- 3. The current Examiner believes a further restriction requirement is necessary to prevent the Applicant from having two independent and distinct inventions claimed under one application and that the application should be further restricted to one of the inventions.
- 4. In the original election restriction, Applicant elected Group II: claims 4-33. Thus, claims 1-3 remain withdrawn as being drawn to a non-elected invention.
- 5. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 4-11, 12-17, 18-24, drawn to a battery charger system having a power supply, a battery pack including a battery and a charging module that monitors the operating mode of the injector system and if the system is in idle mode the module provides DC power to the battery for charging, and if the system is in non-idle mode the module prevents the DC power from reaching the battery and enables the battery to provide DC power to the system, classified in class 320, subclass 127.
 - II. Claims 25-31, 32-33, drawn to a charging module having an output selector stage providing a turn-on signal when the system is operating in an idle mode and a turn-off signal when the system is operating a non-idle mode, a charging stage that if it receives the turn-off signal it prevents the

Page 3

battery from being charged by the power supply and allows the powering of the system and if it receives the turn-on signal it allows DC power from the power supply to be conveyed to the system assuming: (a) a low current charging mode, (b) a multi-state charging mode – wherein the charging operates according to (i) a bulk-charge state, (ii) an overcharge state, (iii) a standby state, classified in class 340, subclass 636.11.

The inventions are distinct, each from the other because of the following reasons:

6. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination (invention II) has particulars that require varying the charging mode between a low current and multistage charging mode allowing for a bulk-charge state, over-charge state, and standby state; whereas the combination does not require these particulars to function as claimed. The subcombination has separate utility such as having varying charging modes and states such as a low current and multi-stage charging mode allowing for a bulk-charge state, over-charge state, and standby state. This allows the subcombination to charge the battery differently under different circumstances and arrive at different battery charge levels and status.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

7. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew M. Gilbert whose telephone number is (571) 272-7216. The examiner can normally be reached on 8:30 am to 5:00 pm Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Sirmons can be reached on (571)272-4965. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
